

Nicarb[®] 25%

Type A Medicated Article with Microtracer[®]

Description:

Nicarb is a highly effective chemical anti-coccidial for the prevention of coccidiosis in broiler chickens. By preventing the adverse effects of *Eimeria* spp. on the digestive tract, Nicarb improves gut health and bird performance.

Active Ingredient:

Nicarbazine 25%

Registered Claims:

As an aid in preventing outbreaks of cecal (*Eimeria tenella*) and intestinal (*E. acervulina*, *E. maxima*, *E. necatrix*, and *E. brunetti*) coccidiosis in chickens.

Directions for Use:

Use nicarbazine Type C medicated feed as the only ration from the time chicks are placed on litter until past the time when coccidiosis is ordinarily a hazard.

Mixing Directions:

Nicarb (nicarbazine) 25% should be thoroughly and evenly mixed in the feed in accordance with current good manufacturing practice for feed. Type C medicated feeds should contain 0.01 - 0.02% nicarbazine. Uniformly mix 0.8 lb. to 1.6 lbs. of Nicarb 25% with one of the feed

ingredients to make 10 lbs. of premix before final mixing. Mix the resulting premix with feed to make one ton (2000 lbs.) of finished feed containing 0.01 - 0.02% nicarbazine.

Warning:

Withdraw 4 days before slaughter when used at levels ≤ 0.0125%.

Withdraw 5 days before slaughter when used at levels > 0.0125%. ←

Caution:

Do not feed to laying hens in production.

Do not use in flushing mashers. Do not use as a treatment for outbreaks of coccidiosis.

If losses exceed 0.5 percent in a 2-day period, obtain an accurate diagnosis and follow the instructions of your veterinarian or poultry pathologist.

Broilers fed feed medicated with Nicarb 25% may show reduced heat tolerance when exposed to high temperature and high humidity to which they have not been accustomed and under severe conditions, fatalities may result. An ample supply of drinking water and adequate ventilation will improve the birds' tolerance of heat.
