

## GemStone® Poultry

... superior technology for today's nutritional challenges.

**GemStone®** organic trace minerals have been specifically formulated for current feeding programs. **GemStone** technology combines years of leadership in the mineral business along with the research expertise customers have come to expect from Phibro Animal Health & Nutrition.

**Research** with highly bioavailable sources of trace minerals (zinc, copper and manganese) in poultry feeding programs has been shown to help:

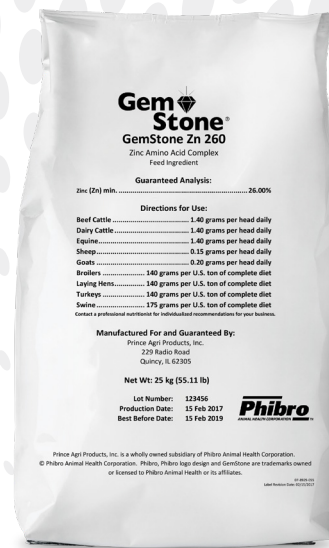

### Broilers:

- Increase weight gain and feed efficiency
- Improve breast meat yield
- Decrease skin lesions
- Improve paw quality

### Layers:

- Improve egg shell quality
- Increase number of sellable eggs
- Improve feed conversion

**GemStone** minerals are exactly what your poultry operation needs to help achieve better performance and improved profitability.

Talk with your feed supplier or nutritionist and ask for **GemStone** minerals from Phibro Animal Health & Nutrition.
