

PHI-CHROME™ Chromium Tripicolinate, from Phibro Animal Health Corporation, is part of the Phibro Mineral Nutrition portfolio.

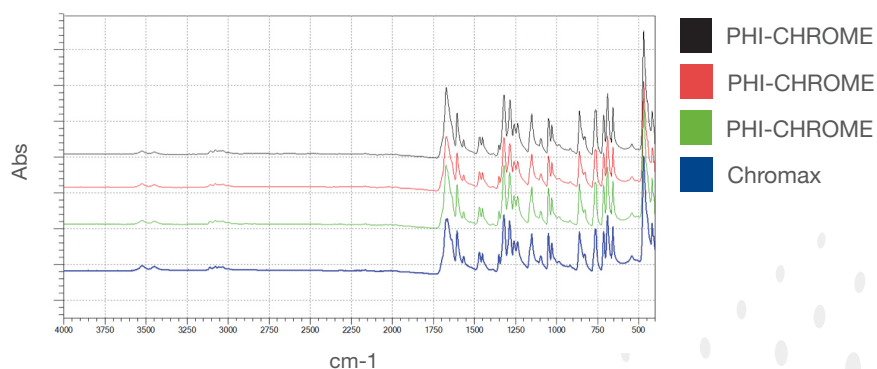

**Phi-Chrome** Chromium Tripicolinate as presented from Phibro:

- Same physical and chemical characteristics as Chromax
- Picolinic acid is bound to chromium to form chromium tripicolinate in both products

In FT-IR, some of the radiation passes through the sample and some is absorbed. The resulting spectrum contains a unique fingerprint of the sample. All three samples of **PHI-CHROME** show the same chemical structure as Chromax.

#### Fourier Transform - Infrared

XRD provides crystalline structure information based on the specific peaks in the diffraction reading. All three samples of **PHI-CHROME** show the same peak positions as those of Chromax.

#### X-Ray Diffraction (XRD)
